

## PLANETA PWRH wire rope hoists

## PWRH-S monorail electric wire rope hoists

### **Compact structure, low weight, low wheel load, maximum space utilisation and high efficiency.**

The new technology guarantees optimised product dimensions and enables the most compact structure with the premise of high efficiency. Within the same installation and the same working area, PLANETA - PWRH-S electric wire rope hoists can cover the maximum working area, maximising the use of the internal space of the installation. By adopting the PLANETA specifications in the construction of the building structure, the height and load resistance requirements can be minimised, resulting in significant savings in investment costs in building construction and civil engineering.

### **Quality components - safe, reliable and durable**

High-quality components are the basis for the outstanding quality of our products. From the hoist motor to the gearbox, the drum, the cable, the electrical components and the structural elements, PLANETA spares no expense in the manufacture of each individual part, as the desired performance and quality depend on the quality of each individual component.

### **Precise positioning, high efficiency**

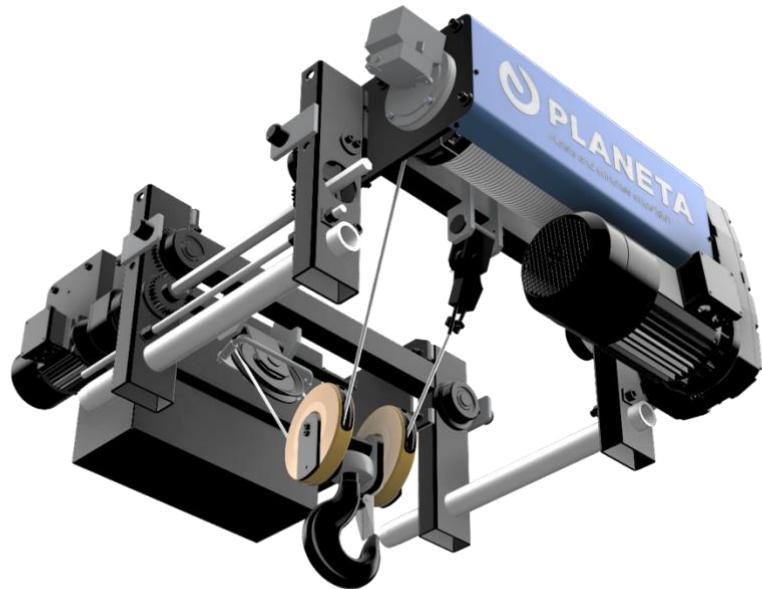

High-quality drive units ensure safe, smooth and efficient operation. Hook travel has been minimised thanks to the compact design. The standard configuration with two-speed hoist control, optionally with inverter control, ensures efficient crane operation and improves logistical efficiency in the workshop so that PLANETA customers' plans can be realised as planned.

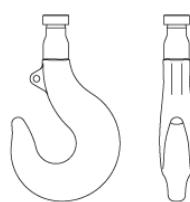

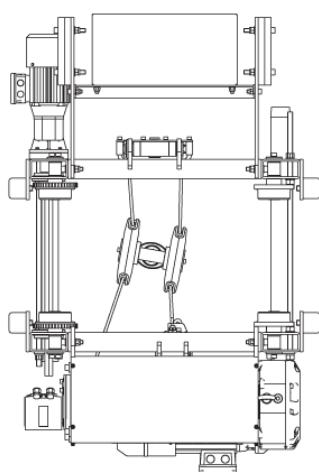

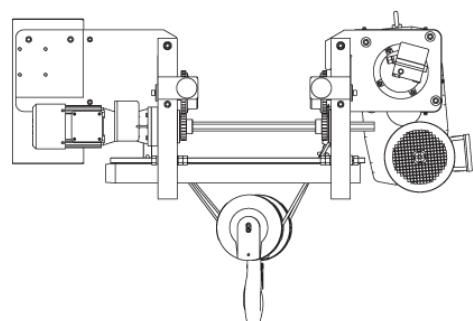

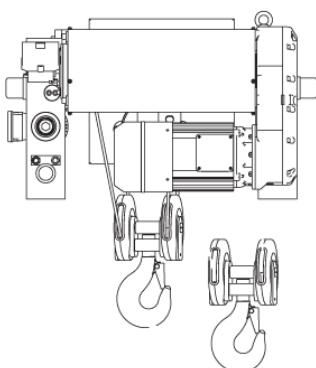

### **Performance monitoring makes it easy to recognise potential problems**

Various control and protection functions ensure that the crane works safely and reliably during operation. The operation control unit can record the operating status of the electric hoist, the motor operating status and the safe working cycle in detail and send error messages in advance. All recorded data can be used in service and help service personnel to identify the root causes, making regular maintenance work much easier.

### **Modular design, simple and low maintenance costs**

The modular design concept permeates the entire product development process, ensuring the standardisation and replacement of components and significantly reducing product maintenance costs. All of the company's product lines have a complete stock of spare parts. Our professional service team is committed to providing our customers with timely customer service to help them solve problems without hassle.

## Double rail electric wire rope hoists PWRH-D

### **Strong and safe**

The new technology guarantees optimised product dimensions and enables the most compact structure with the premise of high efficiency. Within the same installation and the same working area, the electric wire rope hoists can cover the maximum working area, maximising the use of the interior space of the installation. By applying the PLANETA specifications in the design of the building structure, the height and load resistance requirements can be minimised, resulting in significant savings in investment costs in building construction and civil engineering.

### **Quality components - safe, reliable and durable**

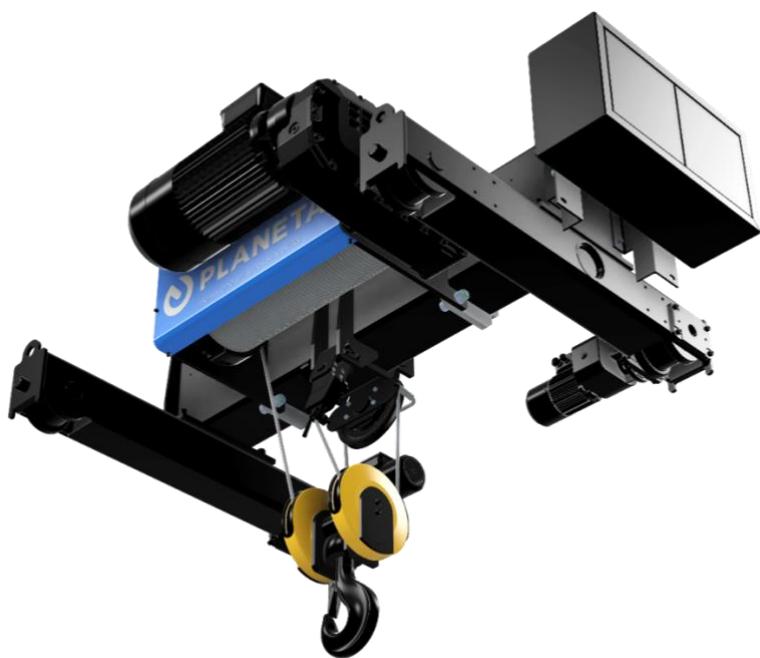

Our components guarantee the outstanding quality of our appliances. The motor, gearbox, drum, cables, electrical components and structural elements are of high quality and from the best brands in the industry. We pay attention to the manufacture of every single part, as performance and quality depend on each individual component.

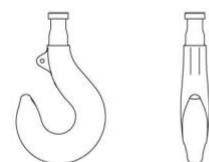

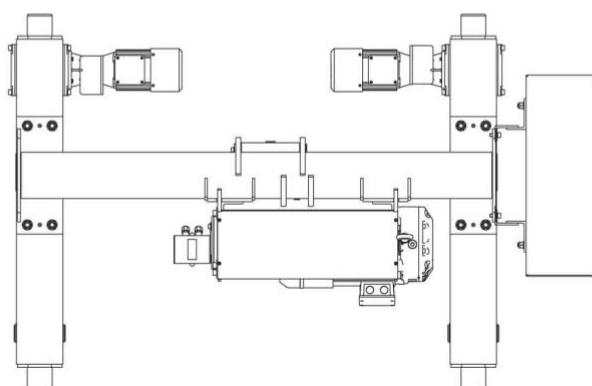

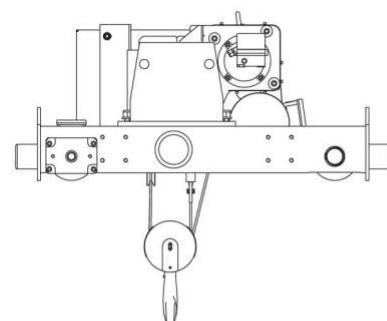

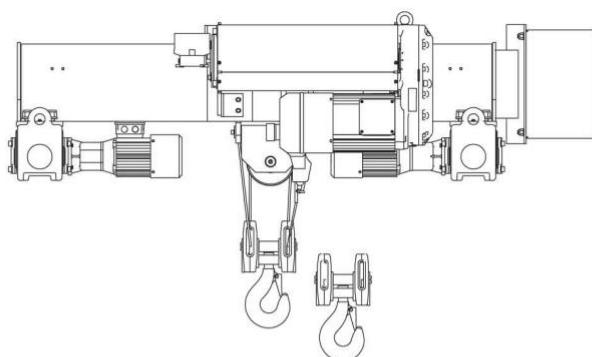

### **Precise positioning, high efficiency**

High-quality drive units ensure safe, smooth and efficient operation. Hook travel has been minimised thanks to the compact design. The standard equipment with a two-stage hoist control, optionally with an inverter control, ensures efficient crane operation and improves logistical efficiency in the workshop so that PLANETA customers' plans can be realised as planned.

### **Performance monitoring makes it easy to recognise potential problems**

With various control and protection functions to keep the crane safe and reliable during operation. The operation control unit can record the operating status of the electric hoist, motor operating status and safe working cycle in detail and send error messages in advance. All recorded data can be used in service and help service personnel to identify the root causes, making regular maintenance work much easier.

## Product features

### HUBWERK

High power, high driving torque and compact design; effective operation of each component ensures high efficiency; low power consumption and low noise, environmentally friendly; smooth operation and low impact force, safe and reliable. Abrasion-free design extends service life; 60 % load class, suitable for heavy-duty operation with high frequency; Asbestos-free brake enables 1 million braking operations; The high IP class of the brake qualifies the device for use in the most aggressive environments.

### SWITCHBOARD

Optimised design for easy maintenance; quality components that ensure the reliability and durability of the appliance; multiple protective devices to ensure safety; IP55 protection rating; clear, standardised labelling for easy operation

### SAFETY CONTROL UNIT

Safe and practical: The intelligent monitoring system with a user-friendly HMI interface enables intuitive operation. It can monitor and record information such as the lift's operating time and the number of overloads. There are regular maintenance reminders and overload alarms. Functionally performs synchronised lifting of two lifts and many other options.

### HIGH PERFORMANCE ROPE

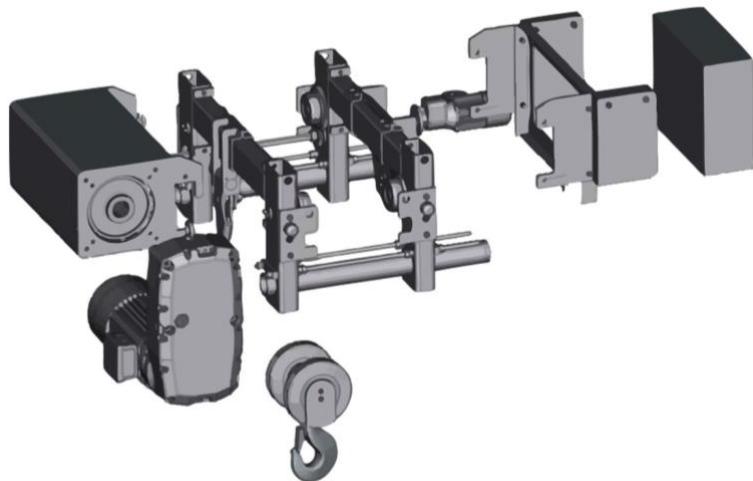

The high-performance wire rope has a tensile strength of up to 2160 MPa, and the properly galvanised surface can effectively prevent corrosion. High flexibility minimises wear and maximises service life.

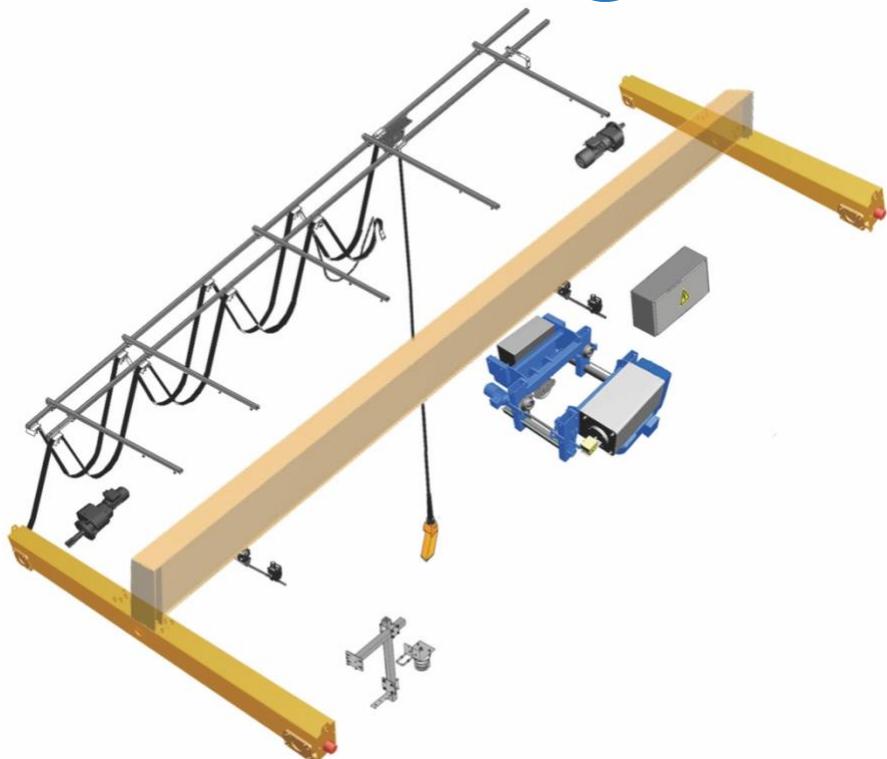

### ROPE GUIDANCE

Manufactured on the basis of engineering plastics or spheroidal graphite cast iron; lightweight and abrasion-resistant, minimises cable wear; effectively prevents the cable from jumping or coming loose from the groove.

### DRIVE

The complete 3-in-1 drive unit consists of a high-performance motor, a gearbox and a brake; it is designed with compact structure, excellent noise insulation, low power consumption and environmentally friendly; inverter control, stable and low impact. Equipped with various travelling speeds. The asbestos-free brake disc guarantees 1 million braking operations; low-wear design maximises service life and minimises maintenance.

## CRANE COMPONENTS

#### **Single-rail and double-rail endcarriages**

High precision, smooth operation, easy installation and maintenance

Our end stackers feature several advanced modular concepts that enable a compact structure and a high degree of customisability. They can be customised to create perfect drive solutions for specific operating conditions and achieve trouble-free operation, absolute safety and reliability with high head flexibility. All versions are designed with a torque-resistant housing and equipped with A-Drive geared motors. They offer protection for the travel paths and are suitable for all conditions.

#### **Complete units**

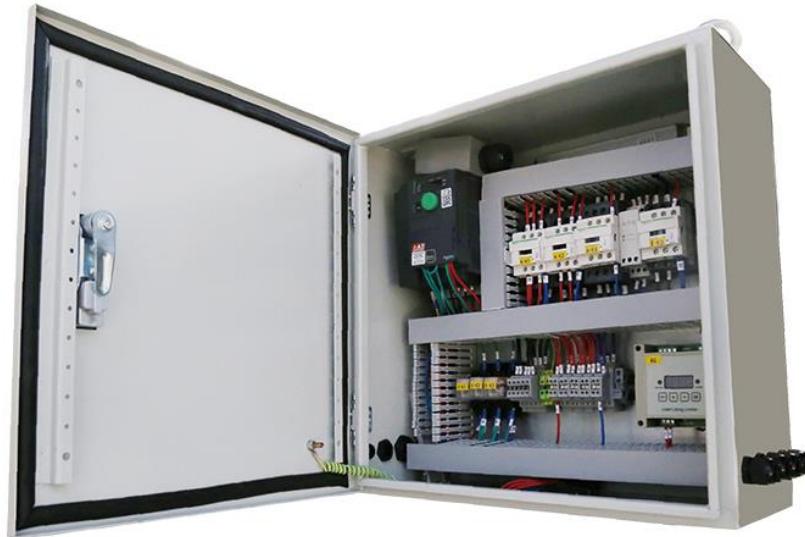

Ready for alignment and assembly. Our end panels (in all versions) are supplied with motor, connection plate, wheels and screws. Their simple design is ideal for installation and maintenance.

#### **Quick installation**

All our units are equipped with quick couplings and are supplied with the elements for easy and safe installation. Ask our sales team for configuration information.

#### **Quality components**

We promote the transfer to our endcarriages with the SEW and ABM brands. Depending on your needs, you can choose the one that best suits your requirements. Request more information from our sales team.

### **Crane control cabinet**

Compact structure, various functions, optimum performance and safety. Optimised design for quick and easy installation; quality components that ensure reliability; multiple protection devices for the safety of your lifting systems; IP55 protection rating; clear, standardised labelling for easy maintenance.

### **Versatile applications**

Suitable for controlling any type of hoist. They can be requested for general functions or for special applications as required.

### **Quick installation**

All our units are equipped with quick couplings and are supplied with the elements for easy and safe installation. Request configuration information from our sales team.

### **Quality components**

We use devices from the German brand Schneider Electric as the main components of our switchgear. This ensures optimum and trouble-free operation. We also offer excellent customer service.
